Module Details			
Module Code:	NETW C7027		
Full Title:	Network Design APPROVED		
Valid From:	Semester 1 - 2019/20 ( June 2019 )		
Language of Instruction:	English		
Duration:	1 Semester		
Credits:	5		
Module Owner::	Martin McCourt		
Departments:	Unknown		
Module Description:	This module provides the student with a system-wide perspective on LAN/WAN design with an emphasis on analysis and techniques for ensuring scalability in networks. The student will be equipped to design enterprise networks that meet a customer's requirements for functionality, capacity, performance, availability, scalability, affordability, security, and manageability.		

Module Learning Outcome		
On successful completion of this module the learner will be able to:		
#	Module Learning Outcome Description	
MLO1	Indentify a customer's needs and objectives.	
MLO2	Analyse both technical and business goals and contraints.	
MLO3	Characterise an existing network and its traffic.	
MLO4	Design a network topology and addressing scheme.	
MLO5	Select the most appropriate switching and routing protocols.	
Pre-requisite learning		

Module Recommendations This is prior learning (or a practical skill) that is strongly recommended before enrolment in this module. You may enrol in this module if you have not acquired the recommended learning but you will have considerable difficulty in passing (i.e. achieving the learning outcomes of) the module. While the prior learning is expressed as named DkIT module(s) it also allows for learning (in another module or modules) which is equivalent to the learning specified in the named module(s).

## No recommendations listed

Business Goals and Constraints Using a Top-Down Network Design Methodology, Changes in Enterprise Networks, Analyzing Business Constraints.					
Technical Goals Scalability, Availability, Network Performance, Security, Manageability.					
Characterising the existing Network Infrastructure Characterising Network Addressing and Naming, Characterising Wiring and Media, Analysing network availability and performance.					
Characterising Network Traffic Characterising Traffic Flow Charactersing traffic load and behaviour Characterising Quality of Service Requirements					
Designing a Network Topology Hierarchical Network Design, Redu	ndant Network Design Topologies, F	Fundamental VLAN Designs, Redundancy and Lo	ad Sharing in Wired LANs.		
Physical Network Design Designing Models for Addressing a	and Numbering, Selecting Switching	and Routing Protocols.
