

**MATH C7002: Mathematics for Computing**

Module Details	
Module Code:	MATH C7002
Full Title:	Mathematics for Computing <b>APPROVED</b>
Valid From::	Semester 1 - 2021/22 ( September 2021 )
Language of Instruction:	English
Duration:	2 Semesters
Credits::	10
Module Owner::	Sarah Tanner
Departments:	Unknown
Module Description:	Introduction to Calculation, Algebra, Logs, Exponential and Trigonometric functions and their application in computing.

Module Learning Outcome		
On successful completion of this module the learner will be able to:		
#	Module Learning Outcome Description	
MLO1	Use algebra to solve problems in computer science.	
MLO2	Identify and use functions, such as exponential laws in a computing setting.	
MLO3	Define and use arithmetic and geometric sequences and series	
MLO4	Use matrix algebra to solve systems of simultaneous equations and carry out transformations.	
MLO5	Define and use truth tables and analyze logical expressions	
MLO6	Define and use number conversions in appropriate number bases	
Pre-requisite learning		
<b>Module Recommendations</b> <i>This is prior learning (or a practical skill) that is strongly recommended before enrolment in this module. You may enrol in this module if you have not acquired the recommended learning but you will have considerable difficulty in passing (i.e. achieving the learning outcomes of) the module. While the prior learning is expressed as named DkIT module(s) it also allows for learning (in another module or modules) which is equivalent to the learning specified in the named module(s).</i>

Module Indicative Content	
<b>Algebra</b> -Use of calculator, algebra, order of precedence, algebraic expressions, indices	
<b>Equation Solving</b> Formulation of worded computing problems, logical structure and transposition of formulae.	
<b>Functions</b> -Analysis of functions, exponential, logarithmic and trigonometric functions.	
<b>Linear Algebra</b> Matrix algebra, inverses and determinants, solutions to simultaneous equations using matrix methods.	
<b>Applied Linear Algebra</b> Matrix transformations, scaling, rotation, translation and reflections.	
<b>Series and Sequences</b> Arithmetic and geometric series and sequences. Convergence and divergence.	
<b>Logic</b> Logical operators, order of precedence, tautologies and truth tables.	
<b>Number Representation</b> Number conversions, binary, hexadecimal, Octal, binary arithmetic, computer representation of decimal numbers.	
Module Assessment	
Assessment Breakdown	%
Course Work	60.00%
Final Examination	40.00%
